DOUBLE WELCOME FOR FRANZ HUELLE IN NEW BPF PIPES GROUP AND BSI COMMITTEE ROLES

Franz Huelle has been welcomed as the new Chair of BPF Pipes Group's Building Services application group (AG2 WG1), looking at hot and cold applications for plastic pipes and systems.

He was also recently appointed Chair of the British Standards Institute (BSI) Committee on plastic pressure pipes (PRI/88/2), which inputs to CEN, ISO and other relevant standards on plastics piping systems and components for pressure applications, including water and gas distribution and industrial applications.

Franz, who is Head of Technical at Rehau's Building Solutions division, is looking forward to both of his new roles: "There is a lot of standards development work going on in plastic pipes and I'm joining these two bodies at an exciting time. I'm very much looking forward to working together across the industry with like-minded people to deliver the best possible standards and guidelines, so installers, consultants and end consumers can always have the highest confidence in plastic pipes."

The BPF Pipes Group website provides advice and guidance on many plastic pipe applications at www.bfppipesgroup.com and it is proving to be a useful reference base for those working with plastic pipe systems across all utilities, construction and plumbing and heating.
